

Proof EnviroTabs® Reduces Emissions

EnviroTabs® allows fuel to burn quicker inside the combustion chamber leaving less emissions to exit out the tailpipe during the exhaust cycle reducing harmful hydrocarbon emissions by as much as 75%.

I was very excited about the fuel savings I could get with EnviroTabs®. However, I wanted to know that it would really reduce my emissions. So, I decided to find a testing station here in the Chicago area that would test my truck before I started using the product. Well, the baseline test was very average and within the acceptable range for the

emissions. A week later after using the product I went back in and the Tech didn't think a little pill could have any effect. After he re-tested the emissions, he re-checked it because he couldn't believe the results. The hydrocarbons dropped from 60 to a very impressive 14. I was sold on the product and felt great that it really does do what it says.

- Greg G. (2003 Tahoe)

Driving a private car is probably a person's most polluting daily activity. In an effort to curb pollution, many states have enacted legislation requiring that vehicles must pass an emissions test before they can be registered. Many EnviroTabs® users with vehicles that were not passing their states emission's test have found that after using EnviroTabs® in two tanks of fuel their vehicles were able to pass. In addition to saving fuel costs, using EnviroTabs® lowers emissions on vehicles which is great for the environment.

Greenfoot Global's mission is to bring EnviroTabs® to the world and help reduce the emissions in at least 10% of the world's vehicles. This is one way we do our part to help protect the planet we all share.

Results may vary based on temperature, road & traffic conditions, vehicle and engine age, and operator variables. Simply put, if you do not save more money on fuel purchases than the cost of the product, Greenfoot Global will provide a full refund.
